

Unparalleled in the safe distribution of dangerous goods

Highly acclaimed the world over for outstanding performance benefits, the Harcostar L-ring was designed in Germany by our licensor, Mauser, in 1976 and introduced to the UK by Harcostar in 1979.

The L-Ring drum has since set new standards in rigid plastics transport packaging. It is now universally regarded as the most reliable large drum of its type for liquid products. Including many dangerous ones. Harcostar L-Ring drums afford the same degree of protection for many filling goods as steel drums, but they are much lighter in weight, easier to clean for re-use and unlike steel drums, they do not corrode, nor are they easily damaged. All of which provides for a long service life with the minimum of maintenance.

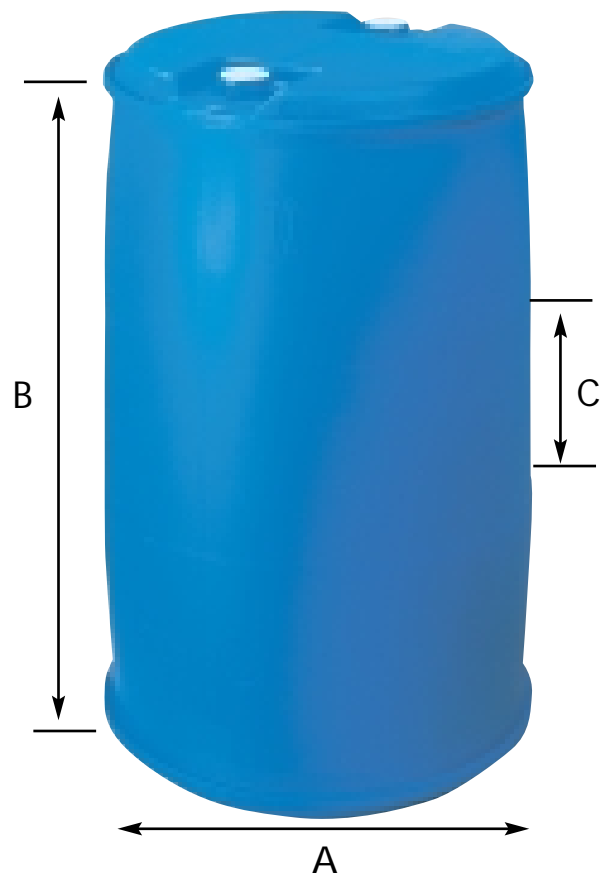

Dependable stacking strength with high load gearing potential

Recessed centre label panel

Harcostar L-Ring Drum

- Dependable stacking strength with high load gearing potential. The L-Ring can be stacked three high on reversible closed deck pallets.
- Safe and easy to handle, using the same mechanical devices as their steel counterparts. No special equipment is needed.
- Compression moulded L-shaped rings top and bottom.
- Recessed centre label panel.
- 100% on-line leak tested for added quality assurances.
- Tamper evident protection giving a safe and effective solution with Harcostar plastic overseals.
- UN test performance - certified for the International Transport of Dangerous Goods.
- Also compatibility performance tested with all RID/ADR standard liquids.

Basic Data Guide								
Nominal Capacity (litres)	Tare Weight (kg)	UN Packing Group Ratings			RID / ADR Standard Liquids Approvals	Dimensions (mm)		
		I (rd)	II (rd)	III (rd)		A	B	C
210	8	-	1.5	1.5	Water Wetting Solution Nitric Acid White Spirit Butyl Acetate	572	928	240
	9	-	1.5	1.5				
	10	1.3	1.9	1.9
